

Clinical Trial:

“All the 17 patients who continued treatment showed a subjective improvement of symptoms and the size of the inflamed tonsils reduced appreciably. There was no recurrence during the follow up of 15 months. Our study shows almost 90% improvement with Tonsari capsules in chronic tonsillitis”.

-Dr. N. Ramodas et al Antiseptic 'Dec.83

I have used Tonsari chronic Tonsillitis, chronic Bronchitis with or without wheezing and in skin conditions. I have treated more than 250 cases of chronic Tonsillitis, many times complicated with sinusitis, ear discharges & eye infection. Most of the times the complications are treated first and the basic infection of Tonsils is left alone. Tonsari has the unique actions of treating all these infections together.

In my opinion this drug stimulates body defences. It is not like antibiotics which need minimum blood serum concentration to work. I think it is stimulating antibody products and whole body cell mediated defence.

Tonsari Capsule has increased my clientele. Patients from far away distance recognize me as a specialist to cure Tonsillitis without operation
